Primary care physicians now have available in their office more technologically advanced diagnostic tools and equipment to help their patients, than ever before. New proposed Stark Regulations affecting office based Ultrasound procedures and the growing need for training and understanding by the physician of these procedures makes this program a must for physicians. This is Hands-On Advanced Vascular Ultrasound training program.

Vascular Ultrasound in the office is a desirable addition for the physician because of the medical benefits and the generous reimbursement physicians are receiving from Medicare and other insurance companies. Vascular Ultrasound is extremely advantageous to facilitate a more rapid diagnosis, allow for a more comprehensive evaluation, and care of the patient in the office, and provide more convenience for patients. This is a new opportunity for physicians to improve patient care and add a new revenue center to the office.

During this workshop, physicians will learn the technical skills in performing these ultrasound procedures through hands on training that is performed on live patient volunteers. The physician will be introduced to common pathologies that can be evaluated with ultrasound and evaluate murmurs, bruits, abdominal pain, hematuria, edema, and claudication. This program will cover detailed coding information along with diagnostic criteria and protocols for each Ultrasound Procedure.

Empire Medical Training will provide an abundant amount of information pertaining to reimbursement, marketing, business considerations as well as a step by step outline for each diagnostic procedure. Gain an understanding in the didactics in ultrasound physics of sound, gray scale size parameters, color, pulsed wave and continuous wave Doppler spectral analysis. Also understand and evaluate carotid arteries, aorta, echocardiography, abdominal (renal), lower extremity arterial and venous imaging.

Empire Medical Training has over 10 years of success in training physicians and health care professionals and has a number of courses specifically for the primary care physician that wishes to increase medical and technical skills in order to benefit patients and introduce procedures that can significantly augment the office income. At Empire Medical the physicians programs include Vascular Ultrasound, Advanced Pain Management, Private Aesthetic Training, Cosmetic & Laser Procedures and many more programs designed to integrate the newest treatments available and incorporate new services.

[Empire Medical Training](#) is consistently adding new training programs that provide the newest techniques and procedures in fat injection/transfer/grafting, weight loss, anti-aging, and pain management along with cosmetic enhancement procedures. Empire provides hands-on training workshops for a variety of comprehensive procedures including Botox Cosmetic, Dermal Filler and Autologous Fat Transfer.

Empire Medical Training with Dr. Stephen Cosentino is an American based, nationally recognized CME Training Institution providing further education in the medical industry for Physicians, Dentists, Nurses and Health Care Professionals.
